Daniel N. Maghiș

Product Manager

Product Manager with around 4 years of experience in enterprise SaaS, driving product discovery, roadmapping and cross-functional delivery for workforce management solutions. Since 2025 I've built four products of my own end to end as the sole PM: a web comparison engine, an offline web app for worship teams and two Android apps.

Experience

05/2021 – 01/2025

Junior Technical Product Manager

Enterprise SaaS, workforce management · Timișoara · Full-time

- Owned end-to-end product lifecycle for enterprise workforce management features across 5+ major releases.
- Partnered with engineering and UX to define specs and acceptance criteria, reducing story-cycle time.
- Built and maintained roadmaps in Jira/Confluence, aligning engineering, sales, and customer success priorities.
- Ran user interviews and requirement workshops with enterprise clients, translating insights into actionable epics.

01/2016 – 01/2018

Assistant Manager

Scripture Union Romania · Timișoara · Part-time

- Led cross-functional volunteer teams of 20+ people across social and educational programs for 100+ youth.
- Organized 3 international youth camps per year, owning full logistics and stakeholder communication.

Projects

2026

Setlists.md

Founder & sole PM · Web app (PWA) · setlistsmd.insideahead.com

- Defined an offline-first chord-chart app for worship teams of 3–7 musicians, replacing PDFs and shared docs with one dynamic chart: transpose, capo, Nashville numbers and column layout in a single tap.
- Chose plain Markdown as the song format so users own their data: every chart exports as a portable .md file that stays readable without the app.
- Ran an end-to-end review of ten user flows, from first launch to Sunday morning, that settled the product model (one shared space per church; a setlist is the service) and the beta critical path.
- Planned the rollout: a private soft launch with 5–10 worship teams in December 2026, then a public beta on 1 February 2027.

React · Vite · Supabase · PWA · Tailwind

2026

Meridian

Personal project · Android · insideahead.com/work/meridian

- Designing and building an Android calendar in the spirit of Sunrise that puts events, to-dos and habits in one daily list.
- Shipped natural-language quick add that tells events, to-dos and habits apart, e.g. "Lunch with Priya today at 1pm" or "Run 30 min every weekday morning".
- Built on the calendars already on the phone, with no account and no server; wrote the privacy policy, listing every external service and exactly what it receives, before the store listing.
- Added weather-aware habit scheduling that moves outdoor habits to a dry slot when rain is forecast. Currently at v0.4.

Kotlin · Jetpack Compose · Material 3

2026

Ridely

Personal project · Android, iOS planned · insideahead.com/work/ridely

- Wrote the product brief and principles for a money app for Uber and Bolt drivers in Romania, built around one question: how much did I actually keep?
- Segmented onboarding by business model (self-employed PFA vs. fleet driver), so tax and cash-register features appear only for the drivers who need them.
- Replaced manual entry with on-device screenshot import from each ride-sharing app; nothing is uploaded.
- Cut the home screen to a single headline metric after a review found too many cards and too much text. Now at v0.22 in English and Romanian, with iOS planned from the shared Kotlin Multiplatform code.

`Kotlin Multiplatform · Jetpack Compose · Room`

2025

The Retro Circuit

Founder & sole PM · Web · theretrocircuit.com

- Identified market fragmentation in retro gaming hardware: consumers lacked a reliable way to compare complex device variants. Took the idea from 2022–2023 to a shipped comparison engine, zero to MVP in 3 months.
- Leveraged Google AI Studio as an engineering counterpart — writing precise specs, defining architecture constraints, and managing a CI/CD pipeline (Next.js 16, Supabase/PostgreSQL, Vercel) without writing code natively.
- Architected a relational data schema (Manufacturers → Consoles → Variants) to eliminate 'signal noise' — enabling SKU-level comparisons rather than generic product aggregations.
- Built a restricted Admin Command Center with RBAC and validation rules, enabling non-technical content management and scaling the product catalog without database intervention.

`Next.js · Supabase · SQL · Resend · Jira`

Education

2019 - 2021

Master of Business Management

Universitatea de Vest Timișoara

2016 - 2019

Bachelor of Business Management

Universitatea de Vest Timișoara

Skills

`Product` Roadmapping, Product Discovery, User Story Writing, OKRs, A/B Testing, Agile/Scrum, Zero-to-One Delivery

`Technical` AI-Assisted Development, Relational DB Modeling, Architecture Strategy, Next.js / React, Supabase, Vercel

`Languages` Romanian (Native), English (Fluent), German (Basic)

`Certifications` Product Strategy (PSC) · Product School; Product Discovery · Product School; Product Experimentation · Product School; Product-Led Growth · Product School

Volunteering & leadership

`BBPT`

Social Media Lead

Led social media strategy (Facebook/Instagram) and implemented software for media production and lyric projection.

`Scripture Union`

Team Leader & Coordinator

Recruited and led 20+ volunteers; coordinated international camps, youth programs, and NGO outreach initiatives.
